

PAVEMENT PRESERVATION

RIGHT ROAD, RIGHT TREATMENT, RIGHT TIME

Course Description

Pavement Preservation treatments allow road managers to keep roads in good condition, extending their service life and reducing costly and disruptive repairs and rehabilitation. With shrinking municipal budgets, the need to protect assets and prevent large expenditures is critical. Participants attending this workshop will learn about different preservation treatments used throughout the region, the benefits and limitations of these treatments, the keys to matching treatments to the right roads, and how to work with all stakeholders to implement a successful strategy. They will also have the opportunity to discuss these topics with a panel of their peers from the area.

Target Audience

This workshop is created for municipal officials involved in the planning and selection of pavement preservation treatments. Suggested participants include Public Works Directors, Highway Superintendents, and City/Town Engineers.

Instructor

Robert Betsold

Robert Betsold is in Technical Marketing for All States Materials Group, working with municipal and state DOT agencies across the Northeast on pavement maintenance and preservation treatments, and a broad range of asphalt pavement topics from materials to construction. He is active with local, regional and national industry organizations, including the Northeast Pavement Preservation Partnership, NCAT/MnRoads, and the National Road Research Alliance, and has presented and instructed courses on a variety of pavement maintenance topics throughout the region.
